

ABSTRACT

To provide a surface acoustic wave device in which characteristics can be improved.

The surface acoustic wave device contains a substrate 1010, a plurality of terminals 1051 to 1055 including at least an unbalanced terminal 1051 and balanced terminals 1052 and 1053, and at least one of surface acoustic wave elements 1020 and 1030 disposed between the unbalanced terminal 1051 and the two balanced terminals 1052 and 1053. Different signal lines 1048, and 1041 and 1042 connected to the same surface acoustic wave element 1020 intersect through insulating films 1014 and 1016.
